

HOW ARE WE INVOLVED IN CLIMATE CHANGE?

Resources North is a new society, formed in October 2007, funded by Natural Resources Canada's Forest Communities Program.

Our goal is to work with communities, industries and governments to create new direction, energy and tools that facilitate an integrated approach to resource management.

RNA is home to the Northern Climate Change Network (NCCN), among other natural resource-related projects and initiatives.

Northern Climate Change Network (NCCN)

The **mission** of the NCCN is to:

- *promote proactive community-level adaptation responses to climate change impacts.*

The **objectives** for NCCN as currently envisioned are to:

1. Support and maintain a **network of interested individuals** that fosters greater awareness and understanding of community level climate change impacts and adaptation.
2. Maintain a credible, current and useful **online portal and list serve** that provides access to information, reports, contacts, links to other resources, news stories and upcoming events.
3. Support the members of the network by ensuring the NCCN provides tangible benefits through **meeting identified needs** related to the role and mission of the NCCN.

Please visit our website or contact us for further details.

Our Area Includes...

- A large portion of the north and central BC, totaling nearly 25.5 million hectares.
- Most communities in the region are small and dependent on forest resources.
